Action Planning

Learning Outcomes

We will:

- Look at how Outdoor Learning fits in with PSQM
- Explore the characteristics of effective outdoor learning,
- Consider how to manage children in an outdoor setting,
- Gain a brief overview of Forest School,
- Discuss health and safety in the outdoor setting,
- Make links between Working Scientifically curriculum objectives and Outdoor Learning,
- Explore how Subject Knowledge curriculum objectives can be taught in the outdoor setting,
- Consider assessment in the outdoor setting.

What is Outdoor Learning?

Learning Outside the Classroom (LOtC) is the use of places other than the classroom for teaching and learning. It is about getting children and young people out and about, providing them with challenging, exciting and different experiences to help them learn.

Council for Learning Outside the Classroom

Outdoor Learning is a broad term that includes discovery, experimentation, learning about and connecting to the natural world, and engaging in environmental and adventure activities.

Institute for Outdoor Learning

Outdoor Learning and PSQM

For Primary Science Quality Mark:

Round 20 PSQM Science Subject Leadership Criteria

Science is valued and improved through the development of effective processes for subject leadership:

- A. There is a clear vision for science, created and implemented by teachers and children, through principles for teaching and learning.
- B. Strategic support for subject leadership is provided and includes:
 - Focussed CPD for subject leader
 - Regular release time
 - Resources to facilitate development in science.
- C. There is a monitoring cycle, including pupil voice, that informs actions taken and the development of science.

Outdoor Learning and PSQM

For Primary Science Quality Mark:

Round 20 PSQM Science Teaching Criteria

Subject leadership responds to development needs in science teaching:

- A. There is provision and signposting of relevant internal or external professional development and support with which staff engage.
- B. Teachers are supported to use a range of effective strategies for teaching science which challenge and support the learning needs of all children.
- C. Resources are audited annually, well-organised and accessible, so that children can regularly and safely use appropriate practical and digital resources, information texts and the outdoor environment.

Outdoor Learning and PSQM

For Primary Science Quality Mark:

Rd 20 PSQM Science Learning Criteria

Subject leadership develops teachers' practice:

- A. Children are taught to use different enquiry types to answer scientific questions about the world around them, through the use of scientific enquiry skills.
- B. A range of strategies and processes for formative, summative and statutory assessment are used, which reflect a shared understanding of the purposes of assessment in science and current best practice.
- C. Initiatives that encourage all children to think that science is relevant and important to their lives, now and in the future, are supported and promoted.

Outdoor Learning and PSQM

For Primary Science Quality Mark:

Rd 20 PSQM Wider Opportunities Criteria

Children's experiences of science are enriched:

- A. Curriculum planning links science to other areas of learning.
- B. There is participation in some external initiatives, topical science events and family learning.

Padlet and Break Out Rooms

How is your school managing learning taking place outside?

- What is going well?
- What challenges do you face?
- What questions do you have?

Benefits

- Benefits of being outdoors (University of East Anglia, 2018)
- Impact on educational attainment (EEF, 2018; Education Scotland, 2017)
- Natural Connections (2016)
- Educational benefits (Hamilton, 2018)
- Ofsted – 3 I's; broad and balanced curriculum
- Social Distancing

5 Characteristics of Effective Outdoor Learning

1. one that supports children in making the transitions from within the classroom to beyond it
2. one where there is both regular and frequent use of the outdoor setting.
3. fully prepares children for working in the outdoors by addressing the basic psychological and physiological needs of the children before leaving the classroom
4. the teachers manage the transition back to the classroom as consciously as they manage the move to the outdoor setting
5. a shift to weaker framing

HOATH, Leigh Jane (2015). *A framework for understanding the distinctive characteristics of an outdoor setting pedagogy: a comparative primary education case study approach*. Doctoral, Sheffield Hallam University.

Any advice given by your LA must be considered

Risk Assessment

What are the hazards? What could happen? Please list	Who is at risk?	Current Control Measures in Place	Further action required to reduce risk to an acceptable level	Action by whom	Action by when
Natural and manmade obstacles (trees, ropes etc) – leading to injury	all		Children to be supervised Education Officer to dynamically risk assess the site and any new obstacles created before children are allowed to use them.	Group leaders Helen	At event
Tree climbing – fall leading to injury	all		Children to be supervised Tell children to climb no higher than 2 metres (Helen's insurance)	Group leaders Helen	At event
Rope swings - fall	all	Helen to take down any rope swings which appear unsafe Children not allowed to use the fixed rope swing over the river	Group leaders to supervise Helen to dynamically risk assess the putting up of any new rope swings	Group leaders Helen	At event

Forest School

Forest School is an inspirational process, that offers ALL learners regular opportunities to achieve and develop confidence and self-esteem through hands-on learning experiences in a woodland or natural environment with trees.

Forest School is a specialised learning approach that sits within and compliments the wider context of outdoor and woodland education.

The ethos is shared by thousands of trained practitioners across the UK and beyond. Its roots reach back to early years pioneers in outdoor learning and across the sea to Scandinavia.

'Forest School is a feeling you can't put into words.' Tonicha, aged 9

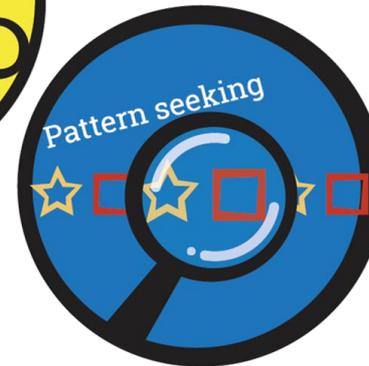

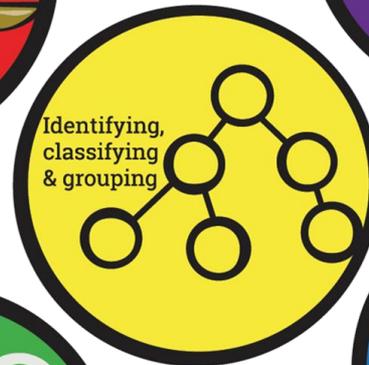

'I don't have ADHD when I'm out in the woods.' David, aged 14

[A Marvellous Opportunity for Children to Learn](#)

5 Types of Enquiry

ReachOut
CPD

enquiring
science⁴all

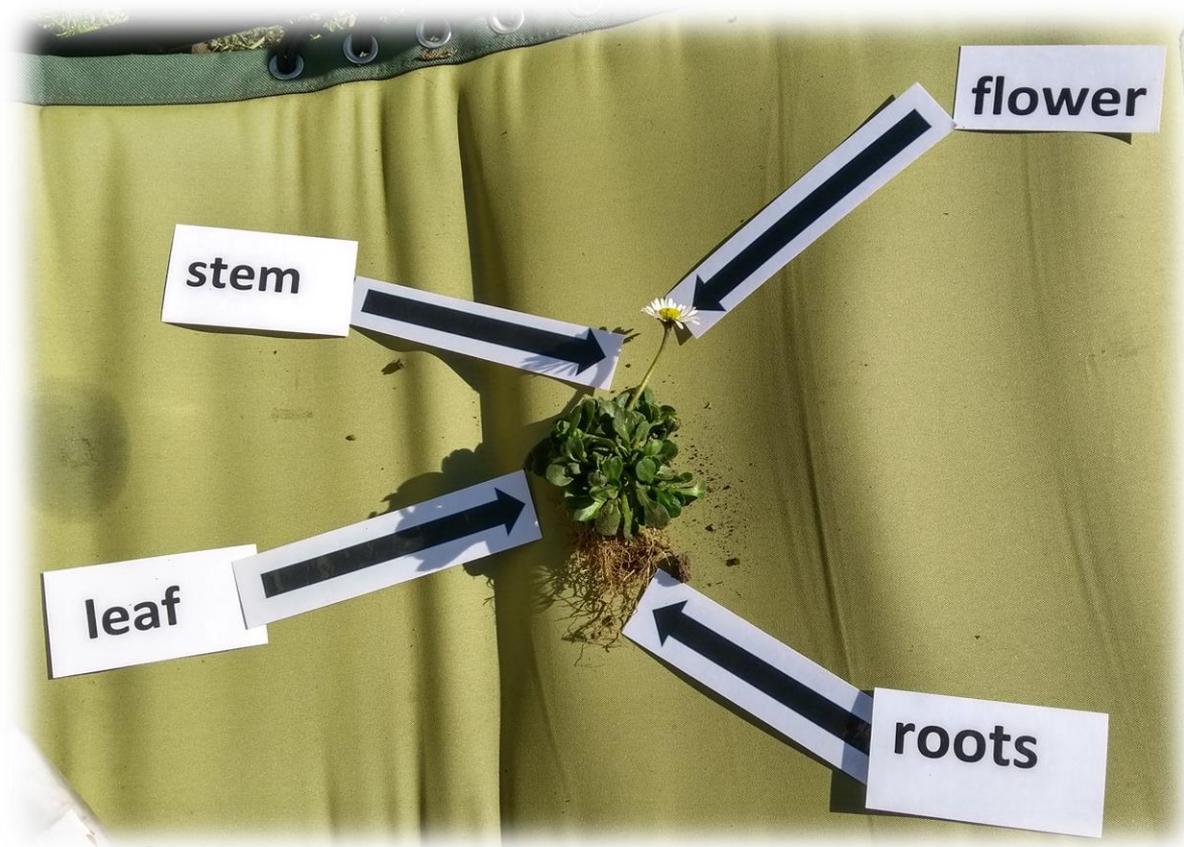

The 5 types of enquiry outdoors...

LA

- Comparative and fair testing – How does the length of time we exercise for affect our heart rate? (taken from [Ogden Trust](#), ‘Developing Children’s skills in Fair Testing’)
- Research using secondary sources – iPad apps – Pl@ntnet
- Observing over time – observe the changes across the four seasons. Can you create a representation of Winter using materials around you? Twig game!
- Pattern seeking – What colour flowers do pollinating insects prefer? (taken from [Ogden Trust](#), ‘Develop Children’s skills in Pattern Seeking’)
- Identifying, classifying and grouping – leaves, trees, fungi, flowers, minibeasts, rocks, materials....

Definitely outdoors....

Could be outdoors....

Planning for Outdoor Learning

- Take a copy of the curriculum
- Highlight the obvious opportunities for outdoor learning in your year group (eg – identifying trees)
- In a different colour, highlight the less obvious opportunities for outdoor learning
- Choose one objective and plan how you will teach it outdoors. What barriers need to be overcome in your context?

Year 2 programme of study

Living things and their habitats

Statutory requirements

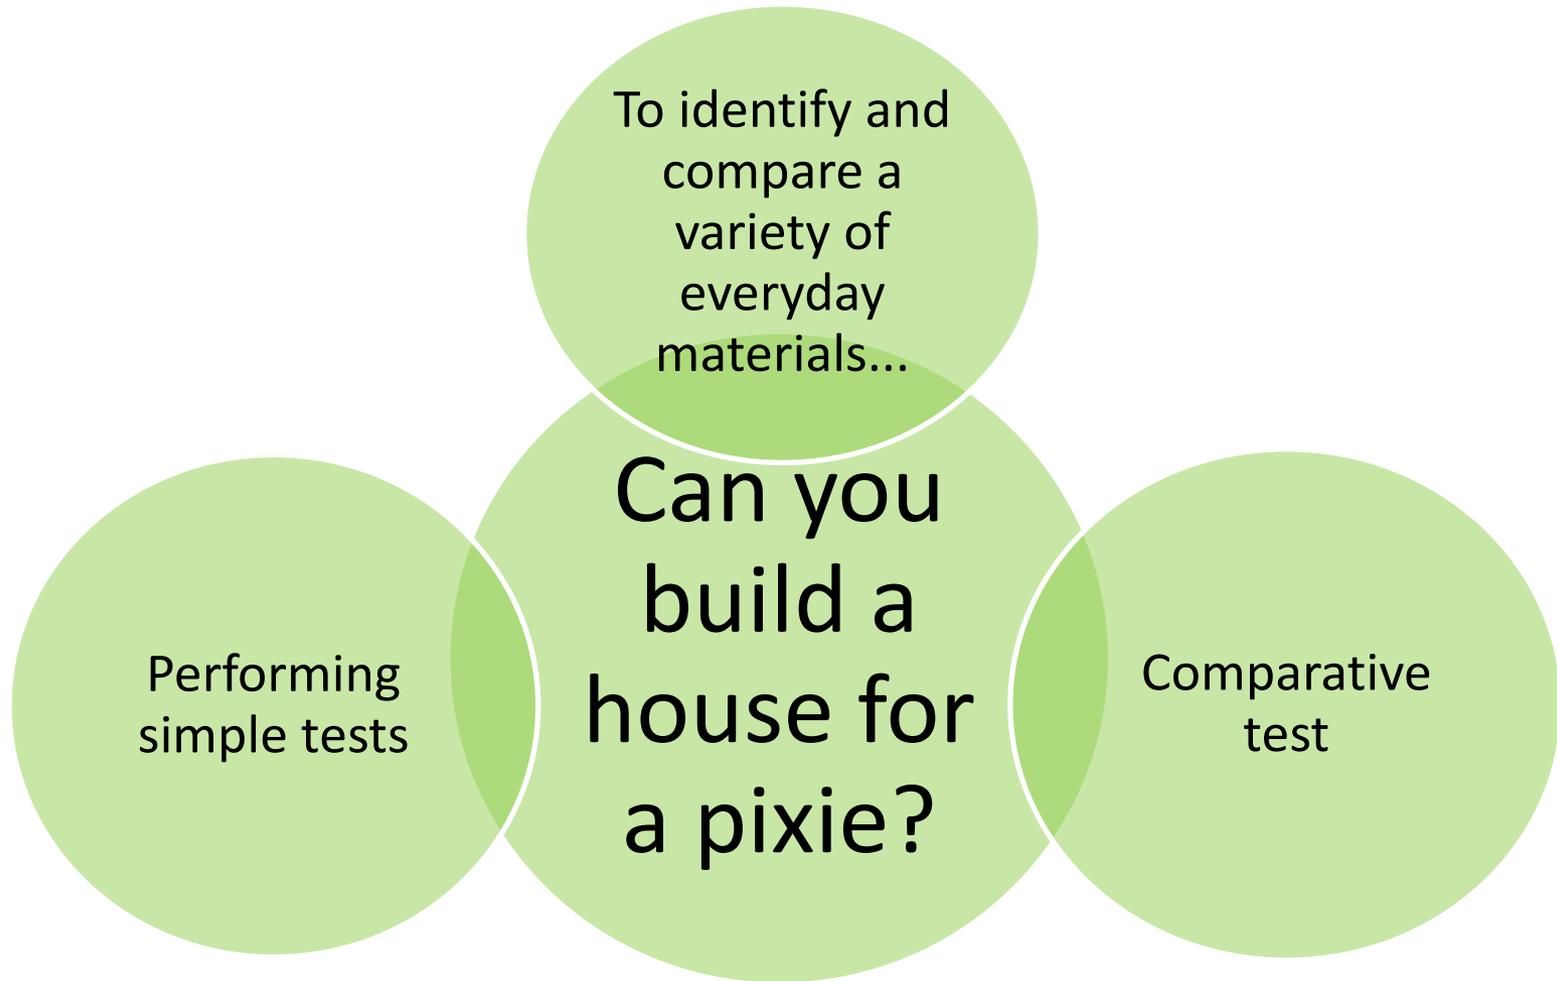

Pupils should be taught to:

- explore and compare the differences between things that are living, dead, and things that have never been alive
- identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other
- identify and name a variety of plants and animals in their habitats, including micro-habitats
- describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food.

Properties and Changes of Materials – Y5

Uses of Everyday Materials – Y2

Uses of Everyday Materials – Y2

Conceptual Knowledge: In this activity, children identify and compare the suitability of a variety of everyday materials

Working Scientifically: In this activity, children perform simple tests

Children meeting the conceptual knowledge objective will be able to say why they have chosen the materials that they have, for example, “I have chosen leaves and plastic for the roof because it is waterproof; I have not used sticks for the roof, because the gaps let the water in.”

Children meeting the working scientifically objective will be able to say how they know which material is ‘best’ for a purpose. For example, “I know that leaves and plastic are waterproof because I poured water over my pixie house and it stayed dry inside. When I poured water over the pixie house with the roof made of sticks, it got wet inside.”

Animals including Humans – Y3

Discuss how the following objectives **could** be taught, or partially taught, outdoors. One person from each group to post in ‘chat’ when you return...

Pupils should be taught to:

- identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat
- identify that humans and some other animals have skeletons and muscles for support, protection and movement.

Assessment

- [PSTT TAPS](#) for assessing Working Scientifically
- [ASE PLAN](#) resources for exemplification of ARE for subject knowledge
- A good tracking system

YEAR 3 SCIENCE ASSESSMENT RECORD							
To judge that a pupil is working at the expected standard in science, teachers need to have evidence which demonstrates that the pupil meets all of the 'working scientifically' statements and all of the 'science content' taught in the final year of the key stage. Where possible, teachers should draw on assessments that have been made earlier in the key stage to make their judgement against this framework.	name	name	name	name	name	name	name
	Working Scientifically: working at the expected standard (LKS2 NC requirements)						
asking relevant questions and using different types of scientific enquiries to answer them							
setting up simple practical enquiries, comparative and fair tests							
making systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers							
gathering, recording, classifying and presenting data in a variety of ways to help in answering questions							
recording findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, and tables							
reporting on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions							
using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions							
identifying differences, similarities or changes related to simple scientific ideas and processes							
using straightforward scientific evidence to answer questions or to support their findings							
Science Content: working at the expected standard (Y3 NC requirements)							
identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers (Y3 Plants)							
explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant (Y3 Plants)							
investigate the way in which water is transported within plants (Y3 Plants)							
explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal (Y3 Plants)							

Assessing Working Scientifically

LB

Primary science enquiry outdoors

Learning outdoors is a key part of primary science. The Teacher Assessment in Primary Science (TAPS) project has created a wide range of activities to support Working Scientifically. Many of these can take place outside and examples are listed below, with hyperlinks directly to the TAPS plan.

	Possible skills focus	Examples of science learning which can be done outdoors	Examples of science learning about the outdoors
Age 4-7	<ul style="list-style-type: none"> - Ask questions - Perform simple tests - Observe closely - Gather and record data to answer Qs - Identify and classify 	<p>How could we make the best shelter? Incy spider shelter R</p> <p>What happens to the ice? Frozen balloons R</p> <p>Which materials can we see light through? Transparency Y1</p> <p>Which objects do we think will float/sink? Float & sink Y1</p> <p>Which material made the best boat? Boat materials Y2</p> <p>How do we get the character out of the ice? Ice escape Y2</p> <p>What materials can we find? Materials hunt Y2</p> <p>How do we test which material is the most waterproof? Waterproof Y2</p>	<p>How can we sort the things we have found? Scavenger sort R</p> <p>Do all leaves look the same? Leaf look Y1</p> <p>What parts does this plant have? Plant structure Y1</p> <p>What colours/shades can we find? Shades of colour Y1</p> <p>What season is it now? Seasonal change Y1</p> <p>What does a plant need to keep healthy? Plant growth Y2</p> <p>What living things can we find nearby? Nature spotters Y2</p> <p>Is this alive? Has this ever been alive? Living & non-living Y2</p> <p>How many daisies are in each area? Daisy footprints Y2</p> <p>Where do woodlice live? Woodlice habitats Y2</p>
Age 7-11	<ul style="list-style-type: none"> - Plan different types of enquiry to answer Qs - Take measurements - Gather, record and classify data - Report findings - Use results to draw simple conclusions - Evaluate degree of trust in results 	<p>Which kind of materials make shadows? Making shadows Y3</p> <p>Which rock is the most hard-wearing? Rocks report Y3</p> <p>How can we package the egg? Egg drop Y3</p> <p>Which area is hottest/coldest? Adapt Measuring temp Y4</p> <p>How do we find out the best conditions for drying? Drying Y4</p> <p>Which is the best material for the job? Adapt Champion tapes Y5</p> <p>How can we compare our planes? Paper planes Y5</p> <p>How far can we make a spinner travel? Spinners Y5 (link to seed dispersal)</p>	<p>How much water do plants need? Measuring plants Y3</p> <p>How can we help our local environment? Eco action Y3</p> <p>What living things can we find? Local survey Y4</p> <p>Making a classification key for our area, e.g. Outdoor keys Y6</p> <p>Plus: Woodland Trust spotter sheets and activities Growing plants website guide for each month of the year Dr Katherine Forsey's detailed plans for pond/bush/minibeast/rock pool hunts</p>

The full set of enquiry lesson plans can be found under the 'Focused Assessment plans' tab, including many others which could take place outdoors:

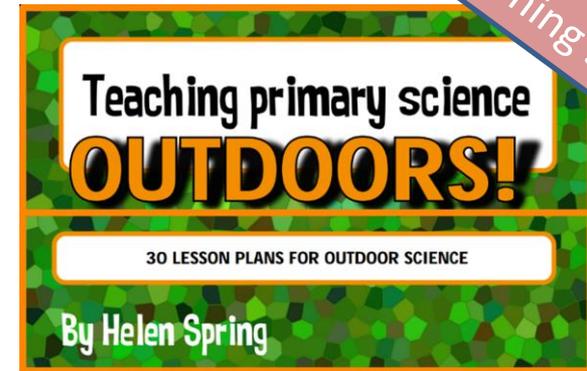

<https://pstt.org.uk/resources/curriculum-materials/assessment>

The majority of plans can be adapted for any age group or situation, so the above are only suggestions.
